Bär service training

The market is constantly developing. New technologies arise, laws are harmonized or further expanded, new personnel enter the sector. Reason enough for Bär to support its partners with a diverse range of service training.

Interested in specific training in our headquarter in Heilbronn, or in your company? Please contact us: training@baer-cargolift.de

6000003598_00_EN
Technical modifications subject to modification. 01/16

Nothing changes as fast as technology. In order to account for this change process, Bär Cargolift arranges professional and comprehensive service trainings.

Service training

Bär service training generally comprises a theoretical and a practical part. This facilitates putting the theoretical knowledge into practice during realistic trouble-shooting. As potential training contents Bär CargoLift proposes the following:

- Basic electrics and hydraulics / In-depth electrical and hydraulic circuit diagrams
- Functions and parts
- Maintenance, repair, emergency operation
- Bär CargoCheck incl. Bär CargoApp diagnostics
- Test log
- Administrative (e.g. WebShop, warranty, etc.)
- Practical trouble-shooting

If the training takes place in our headquarter in Heilbronn, a site tour can also be included. But, of course, you stipulate not only the contents but also the location of training. For further details, please contact: training@baer-cargolift.de.
