

Bär Cargolift – Lifting Performance.

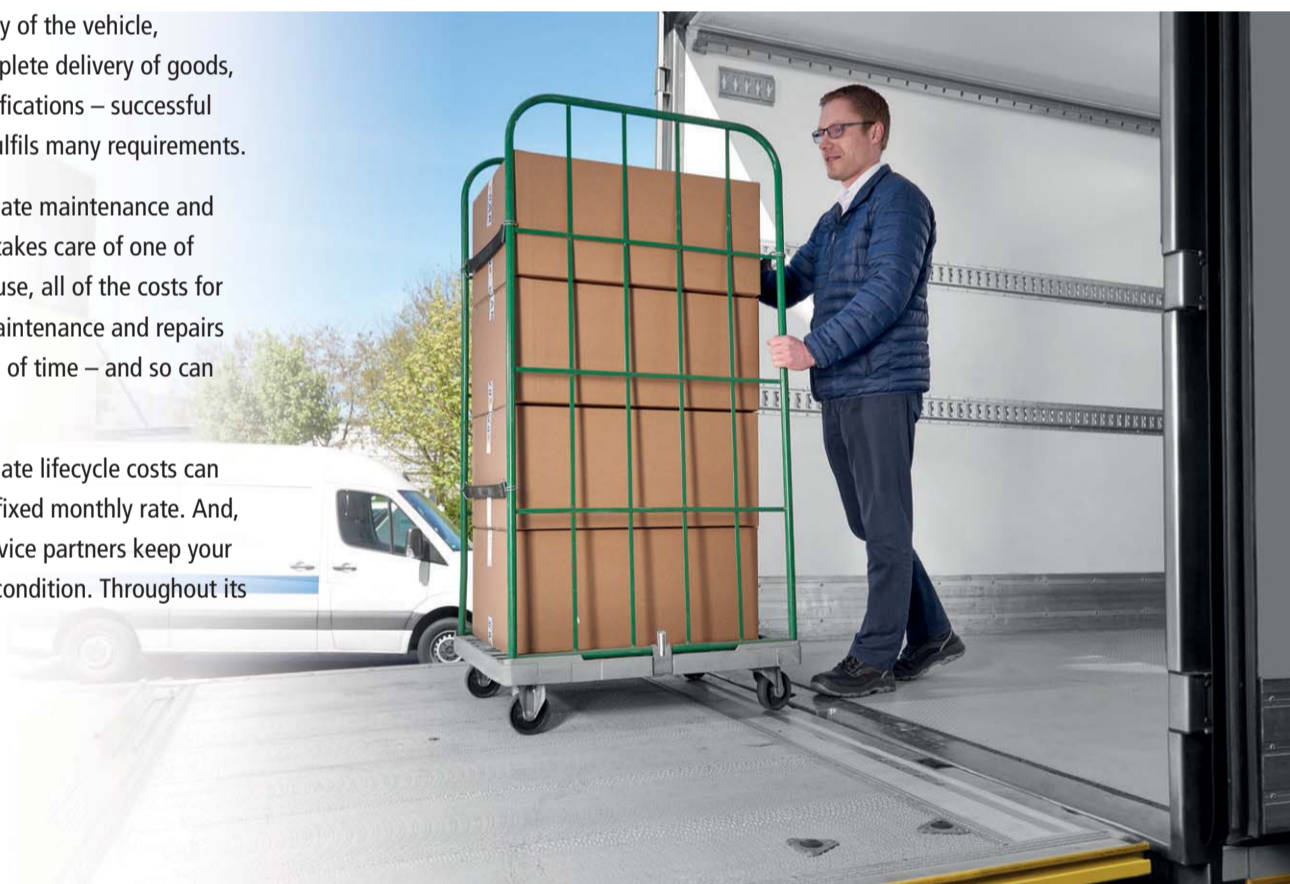

Bär CargoRate –  
The maintenance and repair contract for your Bär Cargolift

Maximum availability of the vehicle, punctuality and complete delivery of goods, practical driver qualifications – successful fleet management fulfils many requirements.

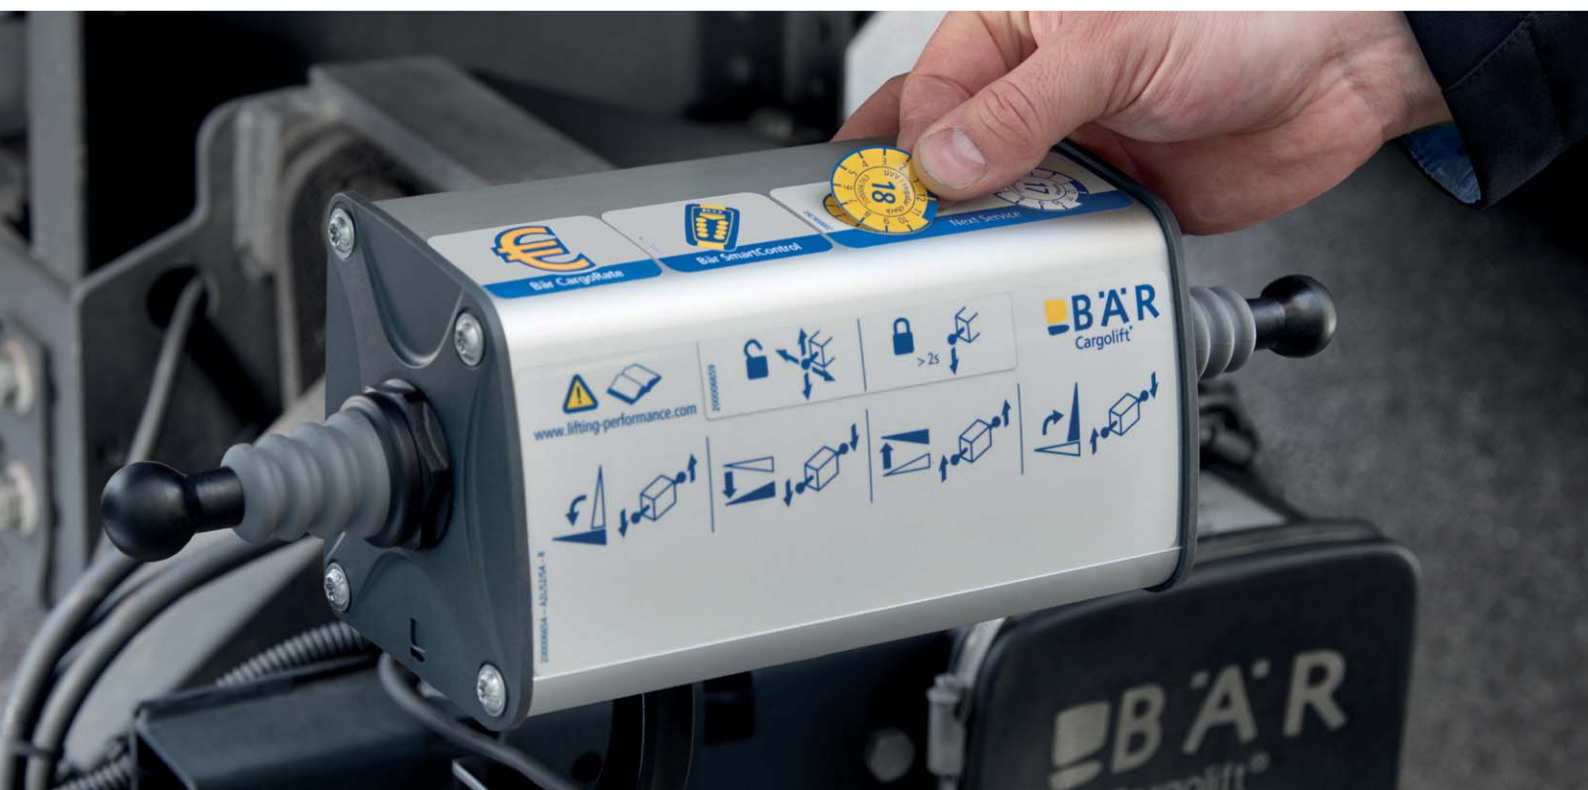

With the Bär CargoRate maintenance and repair contract, Bär takes care of one of your concerns. Because, all of the costs for repetitive checks, maintenance and repairs are set over a period of time – and so can be planned in.

So, difficult-to-calculate lifecycle costs can be converted into a fixed monthly rate. And, our qualified Bär service partners keep your Bär Cargolift in top condition. Throughout its entire service life.

Regular inspection through Bär service partners

Regular inspection of the Cargolift is necessary for compliance with legal regulations. A qualified Bär Cargolift service partner of your choice will carry out this inspection meticulously. After the test is successfully completed this will be indicated with an inspection label. The costs for the inspection are included in the monthly rate for Bär CargoRate. As a result, the service partner charges the costs directly to Bär.

With Bär CargoRate, all of the required maintenance tasks on your Bär Cargolift are also covered throughout the period of the contract. Our service partners use the Bär Cargolift maintenance plan for this. This is your proof that the maintenance has been carried out – together with the service label on the Cargolift.

Faults and system warnings are directly documented thanks to our electronic control unit, the eBC Controller. Our service partners can assess these messages, along with other Cargolift parameters, with the help of the Bär CargoCheck diagnostics software. This ensures that your Cargolift gets the maintenance that it needs.

### Zero risk: Repairs included

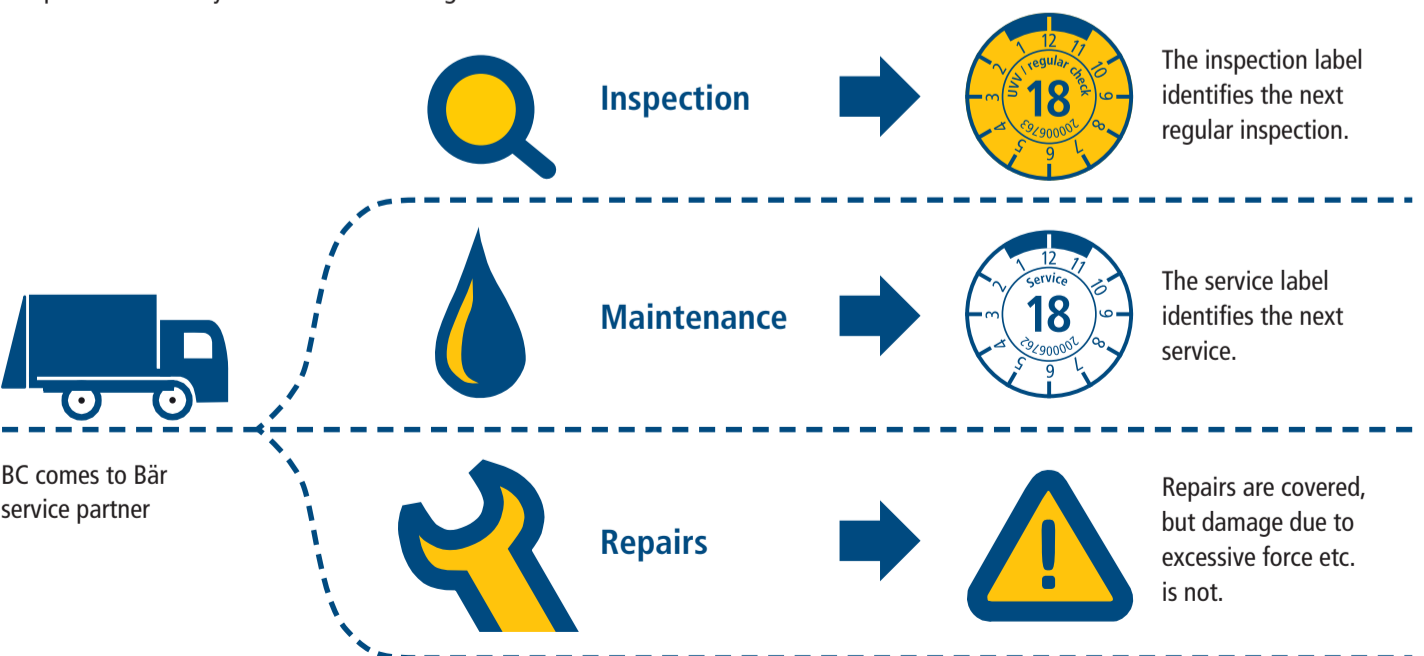

Robust materials are required for professional use. For this reason, the Bär CargoRate also includes repairs caused through wear or defective parts. In doing so, our service partners use only Bär original spare parts.

Repairs caused due to overloading, other types of damage due to excessive force or a failure to carry out maintenance or inspection checks, are not covered by the Bär CargoRate. Warning flags are restricted to one set per year.

### Bär CargoRate maintenance and repair contract

With Bär CargoRate, the invoicing for the services from the service partner are presented directly to Bär in the following three scenarios.
