

Data interface Bär CargoConnect

Lifting Performance. Since 1981.

Data interface Bär CargoConnect – the telematics solution by Bär

Since the company was founded in 1981, Bär Cargolift has seen its tail lifts as an „integral part of the commercial vehicle system“. For digital integration, Bär therefore offers a standardised data interface according to DIN 4630. Bär CargoConnect enables communication with telematics as well as with the chassis/trailer and its body components – whether for display in the cab or for monitoring the Cargolift in the online portal!

The goal is maximum availability of the vehicle as well as a smooth logistics chain. Here, Bär CargoConnect offers the following options and information like:

Next maintenance date
for plannable maintenance

Operating hours
determine the total operating time

Lock/unlock function
for transport of critical goods

Error display
for quick troubleshooting

Position BC / Status Operation
for overview during lift operation

Number of cycles
for visualisation of the number of lifting operations

Geofencing,
when the place of use is crucial

Information about the Cargolift, so that
things can be done quickly in case of service

Interested? Contact us – we will find your solution!
